Leitz shapes Aluminium composite panels

Tool programme for CNC machining Aluminium composite panels.

Aluminium composite panels are often used in building architecture, fabrication and the vehicle industry when special requirements are placed on the stability and flexibility of the construction elements, on durability of finishes or weight reduction. The fact that the variation of panel shape, size and material properties are used, can make the processing of these materials a real challenge in many cases.

Leitz offers an optimally coordinated range of tools for the processing of Aluminium composite panels, whose versatility is particularly impressive due to its high quality and performance.
